Try Ubuntu

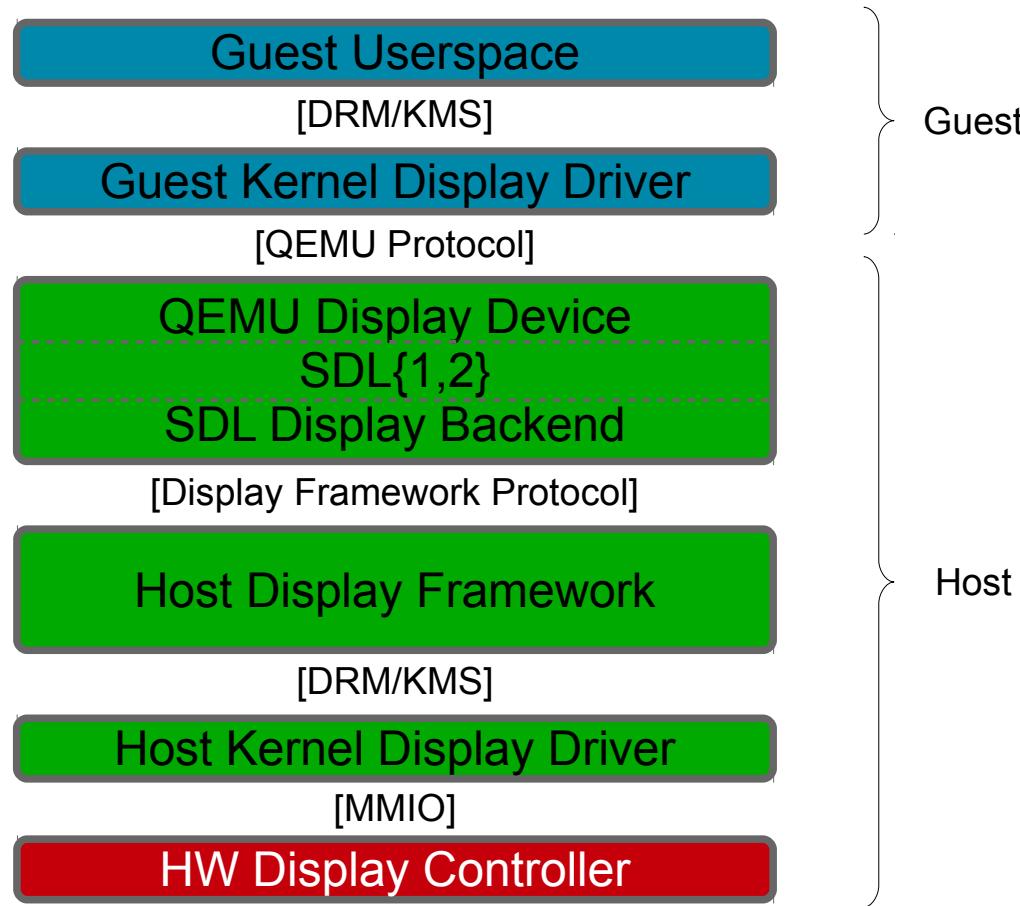

Install Ubuntu

You can try Ubuntu without making any changes to your computer, directly from this CD.

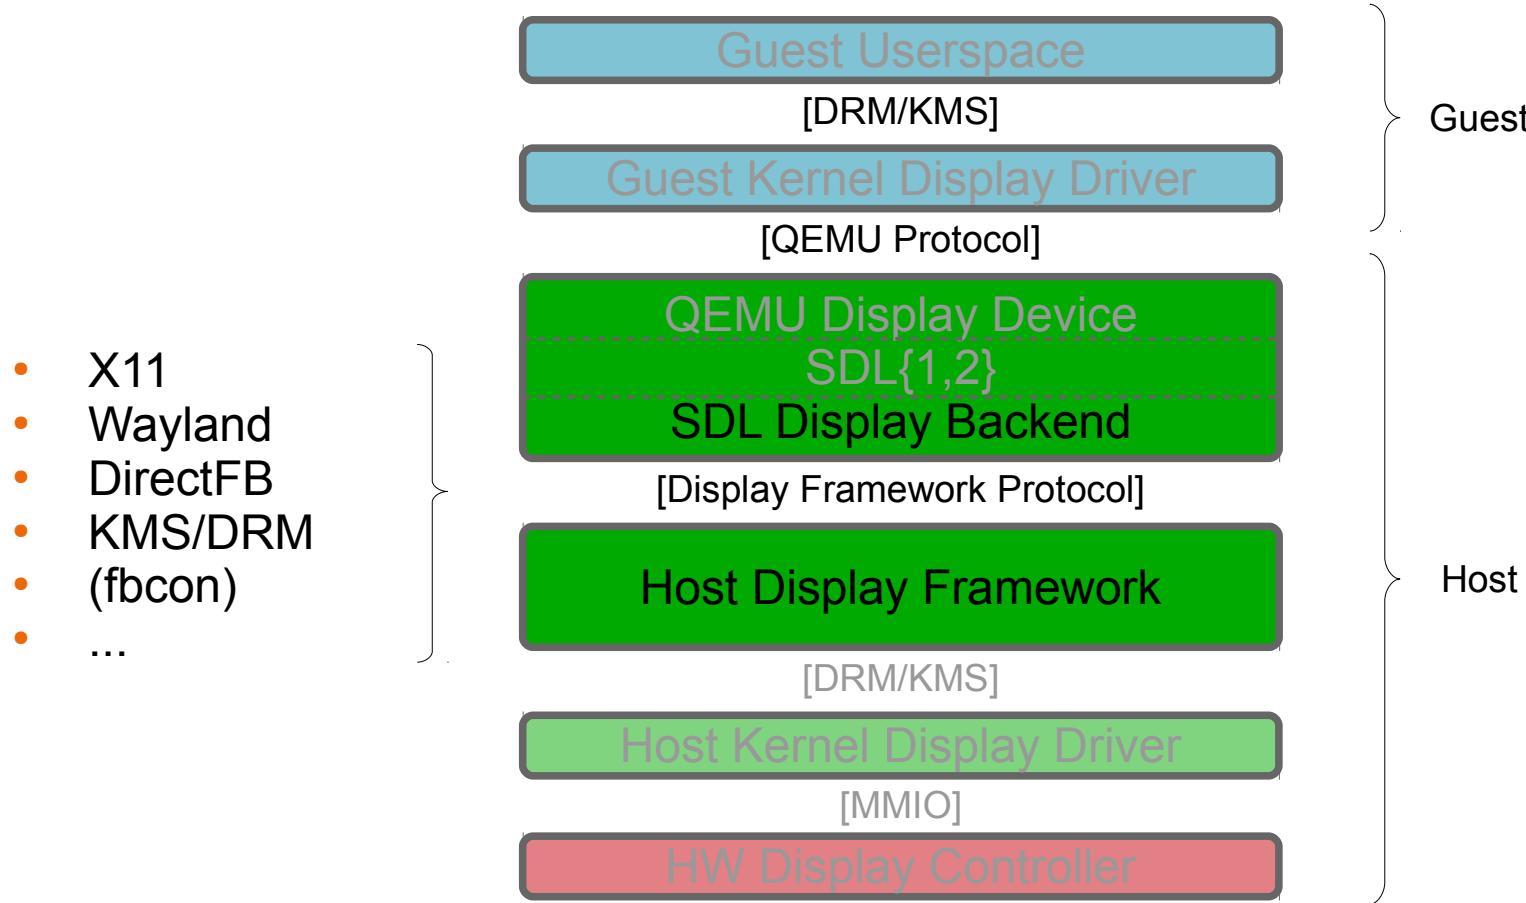

Or if you're ready, you can install Ubuntu alongside (or instead of) your current operating system. This shouldn't take too long.

You may wish to read the [release notes](#).

# H3 DU Virtualization – virtio-gpu

# `memcpy()`

H3 DU Virtualization – `virtio-gpu`

## 4.35 KVM\_SET\_USER\_MEMORY\_REGION

Capability: KVM\_CAP\_USER\_MEM

Architectures: all

Type: vm ioctl

Parameters: struct kvm\_userspace\_memory\_region (in)

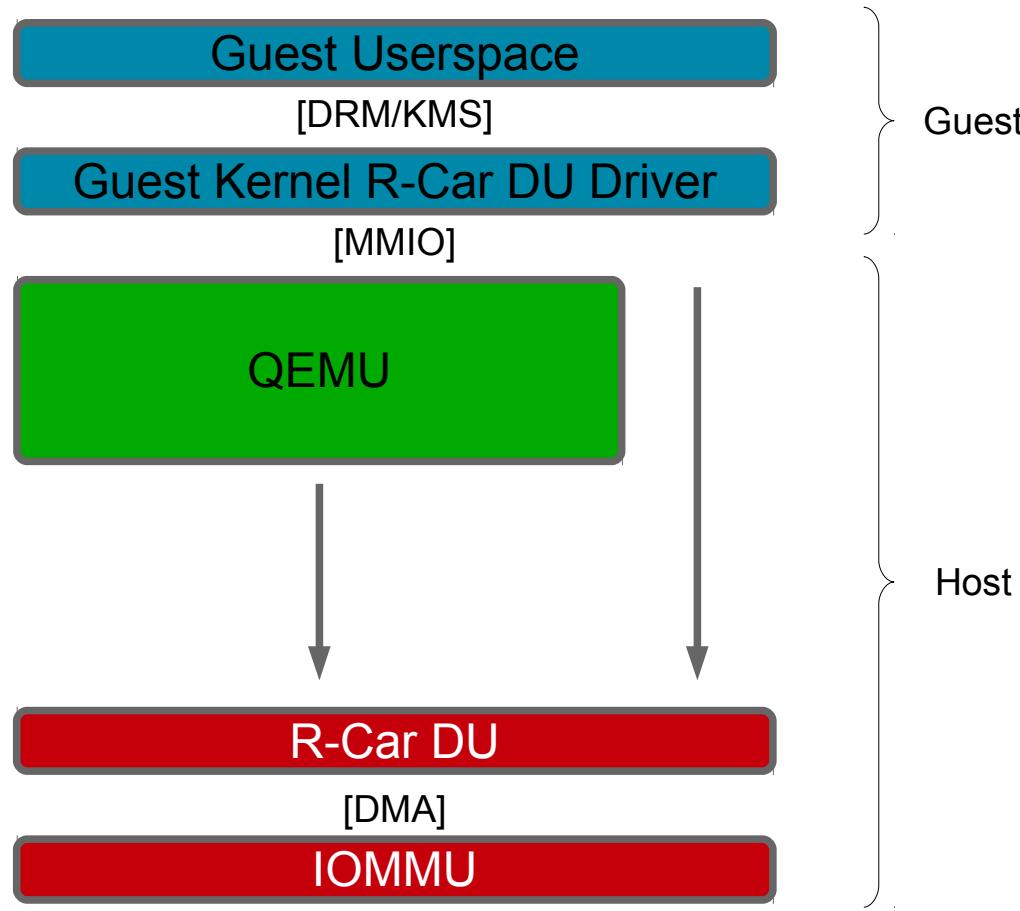

Returns: 0 on success, -1 on error

...

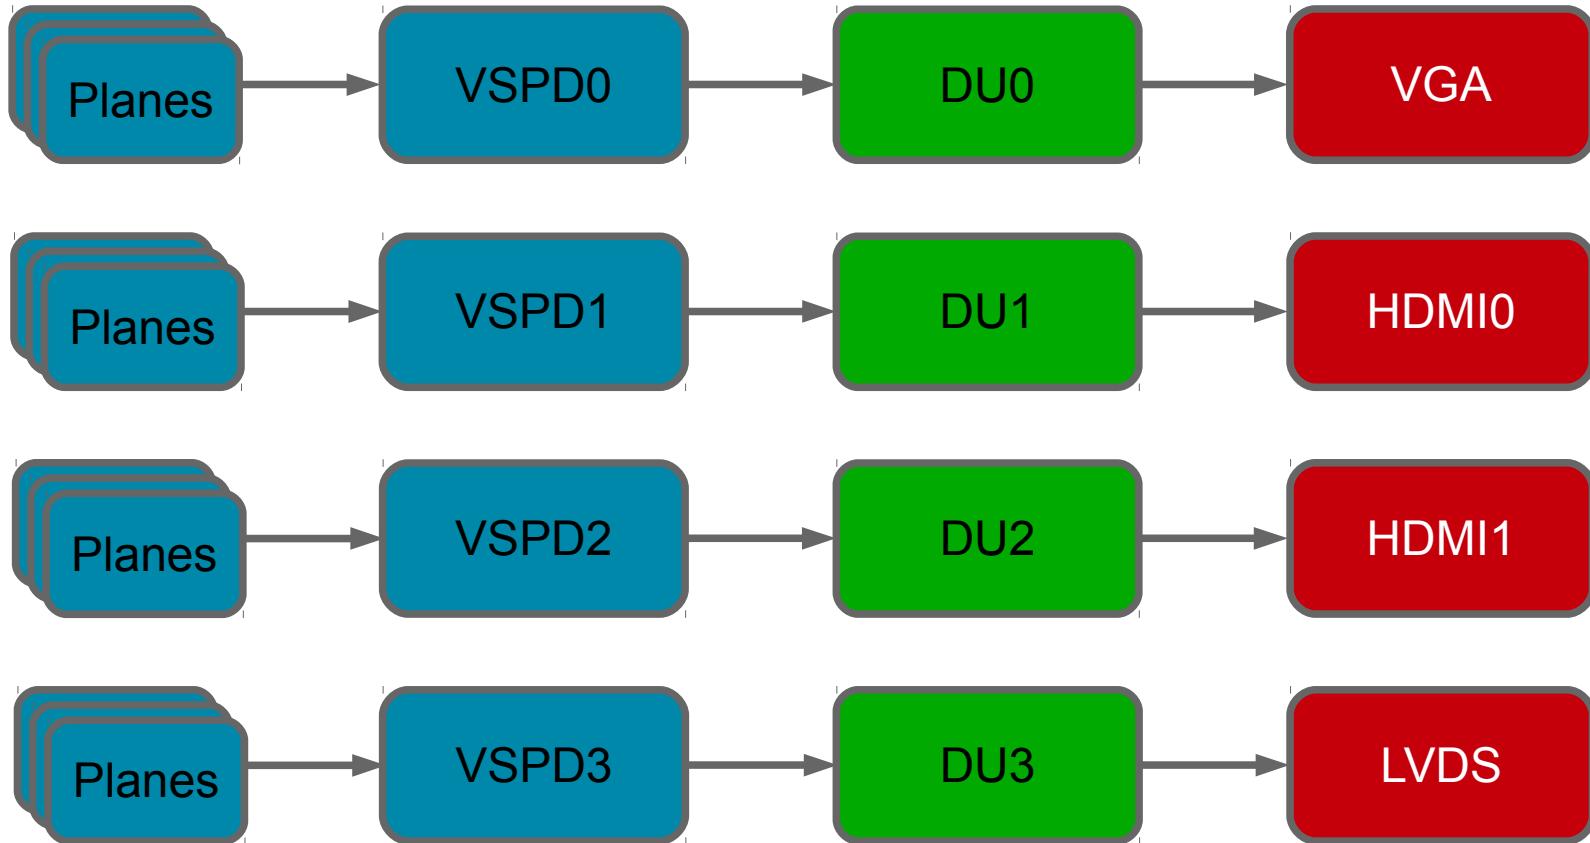

This ioctl allows the user to create or modify a guest physical memory slot. When changing an existing slot, it may be moved in the guest physical memory space, or its flags may be modified. It may not be resized.

Slots may not overlap in guest physical address space.
